Dyeing Testing Machine

This drum-dyeing machine is designed to make dyeing test on tubular hoses, knitted fabrics, which are to be placed into the drum for dyeing. As the drum is partitioned into one or two chambers, each chamber of which is to be put one each of test piece, and rotate, no tangling on each test piece occurs consequently. This will result in no unevenness in dyeing.

Specifications

DRUM COLOR

Construction	Complete machine is constructed from high grade stainless steel
Drum Dimension	508mm x 508mm
Max. Temperature	98°C with automatic temperature controller
Safety	Complete with water level limit control for protection of electric heaters
Heating Source	Electric heating 18KW (steam heating available on request only)
