# Dent Test Or Cupping Test

Revolutionary apparatus for testing the resistivity of coatings at various stages of deformation in accordance with ISO 1520. The built in gear-box minimizes the manual force which is required to deform the test panel, allowing to perform a smooth deformation. The degree of deformation is digitally displayed at a resolution of 0.01 mm. Mandatory test in Qualicoat, QIB and GSB accredited laboratories.

## DTCT

- Revolutionary apparatus for testing the resistivity of coatings at various stages of deformation in accordance with ISO 1520.
- Deformation is digitally displayed at a resolution of 0.01 mm.
- Mandatory test in Qualicoat, QIB and GSB accredited laboratories.
